2012 Commercial Buildings Energy Consumption Survey (CBECS)

Building Questionnaire – Form EIA-871A

OMB No.: 1905-0145 Expires: 01/31/2016

HOW TO USE THIS QUESTIONNAIRE

The 2012 Commercial Buildings Energy Consumption Survey (CBECS) will be conducted using a *computer-assisted interview* programmed using a software called Blaise. A professional interviewer will administer the questionnaire to the building respondent using a laptop computer. The purpose of this paper representation of the questionnaire is to document the question text, fills, and skip patterns within the 2012 CBECS questionnaire.

PLEASE NOTE: All the question fills and skip patterns were handled automatically by the software and will be transparent to the interviewer, so this document appears much more complex that the actual CBECS instrument.

Each question is formatted as follows:

A1	Question name	SASVAR
ASK		
FILL		
Questio	n text	
RANGE		
NEXT		

The **black box** (A1 here) contains a question number, followed by the **Question name** and the *SAS variable* (if applicable) in the same row. If the SAS variable area says "see below," the variables are found within the Question text box.

The ASK line describes what needs to be true for a question to be asked for a particular building.

There is one variable that is preloaded into each case and used for routing in some questions:

Freestanding – a building that is not attached on any sides

The **FILL** line describes any question fills and the conditions under which each appears. If the fill appears as something such as "A6 [Square footage]" this means that the figure given in question A1 will be filled in.

The **Question text** box shows the question text, and any other elements for each question, such as Show Card indicators or instructions, and the answer choices for each question.

The **RANGE** line is only applicable to numeric questions. It shows the range of answers that will be accepted by Blaise.

The **NEXT** line details the routing for the next question. Follow these instructions <u>in order</u>. Once a true statement is reached, go to the question indicated by the arrow (\clubsuit) .

I understand that it may be difficult to give an exact figure for square footage. However, the size of your building is very important in helping understand its use of energy.

Please look at Show Card A1 and tell me which category best describes the total gross square footage in this building. There are examples provided to help you estimate.

If respondent gives the category code,
 VERIFY the response by reading the full answer

A data center or server farm is a group of networked computer servers that are housed in one location, usually a secure area. The servers perform functions such as data storage and processing.

There are usually many servers stacked in rows of racks and they operate continuously, day and night. Data centers are generally kept very cool and require a dedicated uninterruptible power supply.
